## City Initiates Stage One Drought Plan

### Zebra Mussels in Lake Texoma Limits Water Supply

The City Council, at the request of the North Texas Municipal Water District, initiated Stage 1 of the Drought Contingency Plan. Stage 1 is intended to raise public awareness of the potential drought problems and requests voluntary reduction in water use by public and wholesale customers. The City will also intensify leak detection and repair efforts.

In August 2009, The Texas Parks and Wildlife Department discovered zebra mussels in Sister Grove Creek, a tributary of the East Fork of the Trinity River and used by the NTMWD to transfer water from Lake Texoma. As a result, NTMWD voluntarily ceased pumping raw water supplies from Lake Texoma and has not resumed pumping. The infestation of zebra mussels in Lake Texoma has resulted in a loss of 22.5% of the NTMWD's total raw water supply. At this point, NTMWD does not have a firm date for the resumption of pumping from Lake Texoma.

"Although zebra mussels are not harmful to humans and do not contaminate the water supply, they do attach to water facilities and pipes that pump water causing increased operating and maintenance costs," said Jim Parks, NTMWD Executive Director. "Since Lake Texoma represents a quarter of our water supply, we are working with state and federal agencies to minimize zebra mussels from being transferred from Lake Texoma into the Trinity River basin and ultimately southward to the Gulf of Mexico."
